This paper presents FinCoT, a structured chainof-thought (CoT) prompting framework that embods domain specific expert financial reasoning blueprints to guide large language models' behaviors. We identify those main prome ing styles in financial NLP (FinNLP): (1) standard prompting (zero-shot), (2) unstruc-tured CoT (free-form reasoning), and (3) structured CoT (with explicitly structured reason ing steps). Prior work has mainly focused on the first two, while structured CoT remains underexplored and lacks domain expertise incorporation. Therefore, we evaluate all three promoting approaches across ten CFA-style firial domains and introduce FinCoT as the

challenges in interpretability and domain alien ment (Nie et al., 2024: Arva ai. 2024: Lee et al., 2025). Accordingly, these shortcomings motivate stricter control over a model's intermediate reason-

ing path, which we explore via prompt design. Prompting guides LLM reasoning without extra training. Methods such as Chain-of-Thought (Wei et al., 2023). Code Promotine (Ha et al., 2023). Plan-and-Solve (Wane et al., 2023), and Self-Reflection (Renze and Guven, 2024) encourage stepwise thinking but remain domain-agnostic. In finance, this can lead to omissions in valuation checks or confusion between basis points and percontaines. Ver and world analysis follows welldefined workflows-valuation, discounting, port-

Unlearning vs. Obfuscation: Are We Truly Removing Knowledge?

ABSTRACT

This paper investigates data selection and model merging methodologies aimed at incorporating advanced reasoning capabilities such as those of DeepSeek R1 imo language-specific large language models (LLMs), with a particular focus on the hai LLM. Our goal is to enhance the reasoning capabilities of language-specific LLMs while maintaining their target language abilities. DeepSock R1 excels in reasoning but primarily benefits high-resource languages such as English and Chinese. However, low-resource languages remain underserved due to the dominance of English-centric training data and model optimizations, which limit performance in these languages. This limitation results in unreliable code-switching and diminished effectiveness on tasks in low-resource languages. Meanwhile, local and re gional LLM initiatives have attempted to bridge this gap by developing language, specific LLMs that focus on improving local linguistic fidelity. We demonstrate that, with only publicly available datasets and a computational budget of \$120. it is possible to enhance the reasoning capabilities of language-specific LLMs to match the level of DeepSeek R1, without compromising their performance on te-

TYPHOON T1: AN OPEN THAI REASONING MODEL

Kasima Tharupipitchai, and Kunat Pipatanakui SCB 10X R&D SCBX Group

pittawat, potsawee, kasima, kunat}@scbibw.com

ABSTRACT

This paper introduces Torboon T1, as once effort to develop an once Thai stasoning model. A reasoning model is a relatively new type of generative model built on top of large language models (LLMs). A reasoning model generates a long chain of thought before arriving at a final answer, an approach found to improve performance on complex tasks. However, details on developing such a model are limited, especially for reasoning models that can generate traces in a low-resource language. Typhoon T1 presents an open effort that dives into the details of developing a reasoning model in a more cost-effective way by levering supporting fine-naming using open datasets, instead of reinforcement learning. This paper shares the details about synthetic data generation and training, as well as our dataset and model weights. Additionally, we provide insights gained from developing a reasoning model that generalizes across domains and is capable of generating reasoning traces in a low-resource language, using Thai as an example. We hope this open effort provides a foundation for further research in this field.

Large Language Models Are Powerful!

ช่วยแต่งเรื่องเกี่ยวกับยักษ์ในวรรณคดีไทยให้หน่อย

แน่นอนเลยครับ
ในยุคสมัยที่ป่าไม้กว้างใหญ่ล้อมรอบหมู่บ้านเล็กๆ ริมฝั่ง
แม่น้ำแคว ชาวบ้านเล่าขานกันว่า ทุกคืนเดือนเพ็ญ
มีเสียงกลองดังก้องกังวานจากที่สูงบนเขาผาแดง บาง
ครั้งก็เห็นแสงสีทองสาดส่องลงมาที่พื้นดิน ราวกับใคร
สักคนยืนอยู่บนยอดเขา มองลงมาด้วยสายตาอันลึกซึ้ง
ชาวบ้านกลัว เด็กๆ ต่างหลบเข้าไปในกระท่อม

...

And It's Even More Useful With a Good Prompt

ช่วยแต่งนิทานสั้นแนววรรณคดีไทยเกี่ยวกับ "ยักษ์" โดยมีโครงเรื่องที่สมบูรณ์ (เริ่มเรื่อง – ดำเนินเรื่อง – จบเรื่อง) ให้บรรยายให้เห็นภาพชัด มีบทสนทนา และสอดแทรกคติสอนใจเกี่ยวกับความเมตตาและการให้อภัย ขอให้ใช้ภาษาสละสลวยแบบวรรณคดีไทยร่วมสมัย และให้มีความยาวประมาณ 3 ย่อหน้า

้ในยามราตรีอันเงียบสงัด ใต้แสงจันทร์แผดเผาผืนป่าลึกที่ปกคลุมด้วยหมอกบางๆ ขุนเขาสูงตระหง่านกางกรอบ ท้องฟ้าราวกับกำแพงทองคำ ณ ริมฝั่งลำธารใสสะอาด ผู้เฒ่าชื่อว่า พระยาพิชัย ซึ่งครั้งหนึ่งเคยเป็นนายพลผู้กล้า หาญ ได้นั่งพักอยู่ใต้ต้นศรีตรัง พร้อมกับถือคันเบ็ดไม้ไผ่ สายตาจ้องมองผิวน้ำที่สะท้อนดวงจันทร์ราวกับหยด ้น้ำค้างที่สั่นไหว ทั้นใดนั้น เสียงดังก้องกังวานดังมาจากเบื้องล่างของหุบเขา—เสียงเท้ายักษ์ที่กระทบพื้นดินจนดิน สั่นไหว แล้วปรากฏร่างยักษ์ผู้มีขนาดใหญ่โตราวฏเขา ผิวสีเขียวคล้ำเหมือนใบไม้แห้ง ดวงตาเป็นประกายแดง เหมือนถ่านไฟร้อน แต่กลับมีแววตาที่เศร้าโศก ราวกับมีภาระอันหนักอึ้งซ่อนอยู่ในหัวใจ

And It's Even More Useful With a Good Prompt

The art and science of crafting a good prompt is called prompt engineering

เหมือนถ่านไฟร้อน แต่กลับมีแววตาที่เศร้าโศก ราวกับมีภาระอันหนักอึ้งซ่อนอยู่ในหัวใจ

Prompt Engineering For Eliciting Desired Behaviors

Examples of Prompt Engineering Approaches

Chain-of-thought prompting: Breaks problems into explicit reasoning steps

Plan-and-solve prompting: Outlines solution plan before execution

Program-of thought prompting: Reason through generated code

Generated knowledge prompting: Generates facts, then uses them

Null-shot prompting: Ask an LLM to use non-exist examples

ให้ a และ b เป็นรากของสมการกำลังสอง ถ้า x^2 - 5x + k = 0 และ a^2 + b^2 = 13 ค่า k เป็นเท่าใด **จง** คิดทีละขั้นตอน

เรามาแก้โจทย์ที่ละขั้นตอนกันนะครับ

เรารู้ว่า a และ b เป็นรากของสมการกำลังสอง x^2 - 5x + k = 0

จากทฤษฎีบทของวิเอตา (Vieta's formulas) เรา ได้ว่า:

- ผลบวกของราก: a + b = 5
- ผลคูณของราก: ab = k

โจทย์บอกว่า a^2 + b^2 = 13

เราใช้สูตรทางพีชคณิต:

 $a^2 + b^2 = (a + b)^2 - 2ab$

แทนค่าที่รู้ลงไป:

13 = (5)² - 2ab

13 = 25 - 2ab

...

ให้ a และ b เป็นรากของสมการกำลังสอง ถ้า x^2 - 5x + k = 0 และ a^2 + b^2 = 13 ค่า k เป็นเท่าใด จง วางแผนวิธีการแก้ปัญหาและดำเนินการตามนั้น

แผนการแก้ปัญหา:

- 1. ใช้ความสัมพันธ์ระหว่างรากกับสัมประสิทธิ์ของ สมการกำลังสอง (Vieta's formulas)
 - ผลบวกของราก: a + b = 5
 - ผลคูณของราก: ab = k
- 2. ใช้สูตรทางพีชคณิต:

$$a^2 + b^2 = (a + b)^2 - 2ab$$

- 3. แทนค่าที่รู้ลงในสูตร เพื่อหา ab หรือ k
- 4. ตรวจสอบคำตอบว่าสมเหตุสมผลหรือไม่

ดำเนินการตามแผน:

จาก Vieta's formulas:

a + b = 5 \quad \text{(1)}

 $ab = k \quad (2)$

ใช้สูตร:

 $a^2 + b^2 = (a + b)^2 - 2ab$

แทนค่าที่รู้...
